Interakční diagram

The diagram illustrates the interaction between axial force (Tlak Nx / kN) and bending moment (Momenty My / kNm). The y-axis ranges from -400,00 to 1600,00 kN, and the x-axis ranges from -100,00 to 100,00 kNm. The legend identifies four types of points: M+ (red diamonds), M- (magenta squares), Msd (yellow triangles), and Mrde (green circles). The diagram shows a closed loop representing the failure envelope, with specific points marked for design and service load conditions.

Interakční diagram

Diagram showing the interaction between axial force (Tlak Nx / kN) and bending moment (Momenty My / kNm). The y-axis ranges from -400,00 to 1600,00 kN, and the x-axis ranges from -100,00 to 100,00 kNm. The legend indicates: M+ (red diamond), M- (magenta square), Msd (yellow triangle), and Mrde (green circle). Key values are marked: 46,58 for Msd and 0,00 for Msd.

Interakční diagram

The diagram shows the interaction between axial load (Tlak Nx /kN) and bending moment (Momenty My /kNm). The x-axis ranges from -50,00 to 50,00 kNm, and the y-axis ranges from -500,00 to 2500,00 kN. The legend indicates: M+ (red diamond), M- (magenta square), Msd (yellow triangle), and Mrde (green circle). The diagram is a closed loop with points labeled M+, M-, Msd, and Mrde.

Interakční diagram

The diagram illustrates the interaction between axial force (Tlak Nx /kN) and bending moment (Momenty My /kNm). The x-axis represents the bending moment, ranging from -50,00 to 50,00 kNm. The y-axis represents the axial force, ranging from -500,00 to 2500,00 kN. The diagram shows a closed loop with points labeled M+, M-, Msd, and Mrde. The legend indicates: M+ (red diamond), M- (magenta square), Msd (yellow triangle), and Mrde (green circle). The points are connected by lines, forming a closed loop that represents the interaction between the two variables.

Interakční diagram

The diagram is a plot of Tlak Nx / kN (Y-axis, ranging from -400,00 to 1400,00) versus Momenty My / kNm (X-axis, ranging from -80,00 to 80,00). It shows two main interaction curves: a red curve for positive bending moments (M+) and a magenta curve for negative bending moments (M-). A yellow triangle represents the design bending moment (Msd) at approximately (25,87, 100,00). A green circle represents the design axial force (Mrde) at approximately (0,00, 1062,45). The legend indicates: M+ (red diamond), M- (magenta square), Msd (yellow triangle), and Mrde (green circle).
